REPRODUCTIVE HEALTH OF ADOLESCENCE

Bangladesh aspects.

- There are 27 million adolescents (13 million girls) in Bangladesh. Their literacy rate is 53 percent for girls and 54 percent for boys.
- In Bangladesh puberty occur at age 9 to 14 in girls, and 12 to 15 in boys, or later where nutrition and living conditions are deficient.
- Bangladeshi children are socialized to take up their respective male and female roles well before puberty sets in. This happens mostly due to their life styles that they live in extended families. For this reason, they face fewer problems in their puberty.
- A girl is expected to begin learning proper decorum as a female before the end of childhood so she can play the part well once puberty sets in. A Bangladeshi girl is in this stage from about age 9, 10, 11, or whenever her growth spurt begins, and until she attains menarche.
- The above number of girls and boys they are becoming adult without having any proper knowledge and education on that.

continue

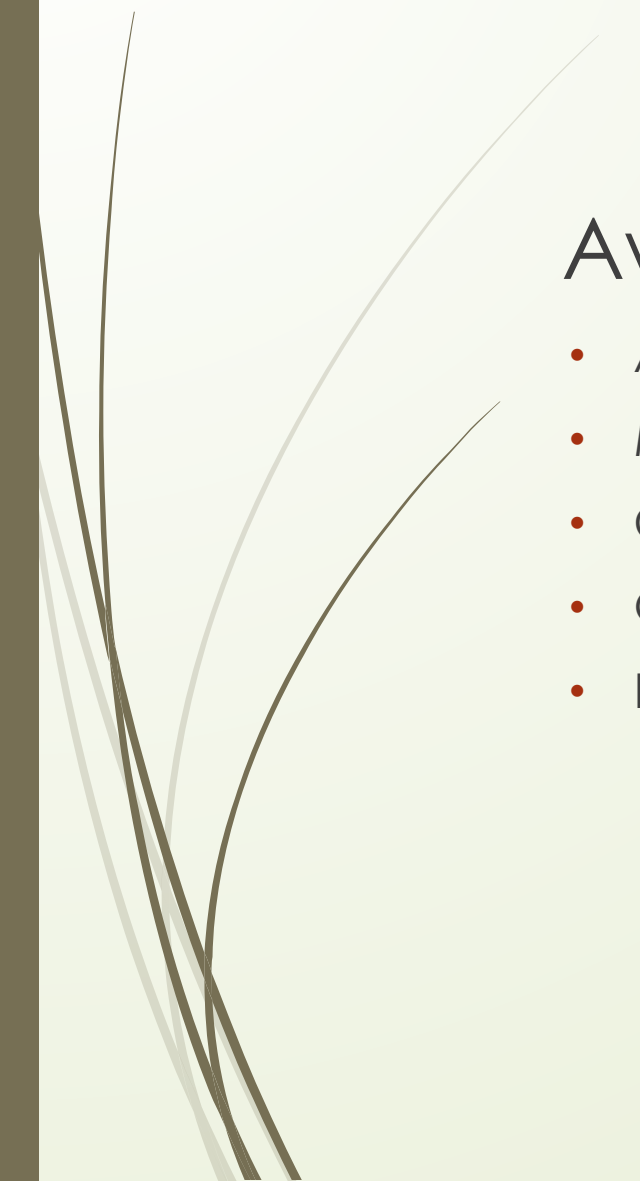

- The most of the girls family they have no idea about adolescence as such their kids they are also not getting any knowledge or advice from their parents/family members.
- The present education system in Bangladesh they also don't have any curriculum to have their children to learn about this fact.
- In any local school in Bangladesh hardly noticeable any hygienic ladies toilet where girls can go for refreshment.

As a result those kids adolescence life is completely jeopardize
